This SUP was designed in response to a request for a sportier version of our boards. Built using the same techniques that our other boards are constructed with, this board features a couple of differences from the other boards in that it uses a fin box and removable fin rather than a fixed wooden fin. The second difference is that the hull is more V shaped forward.

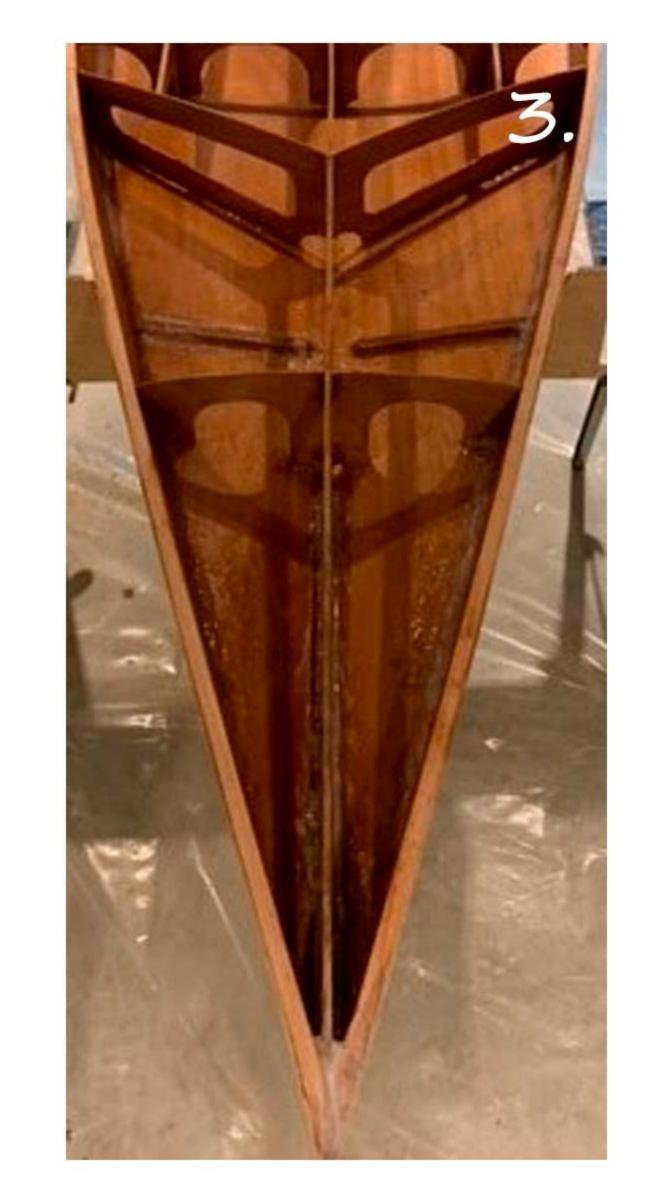

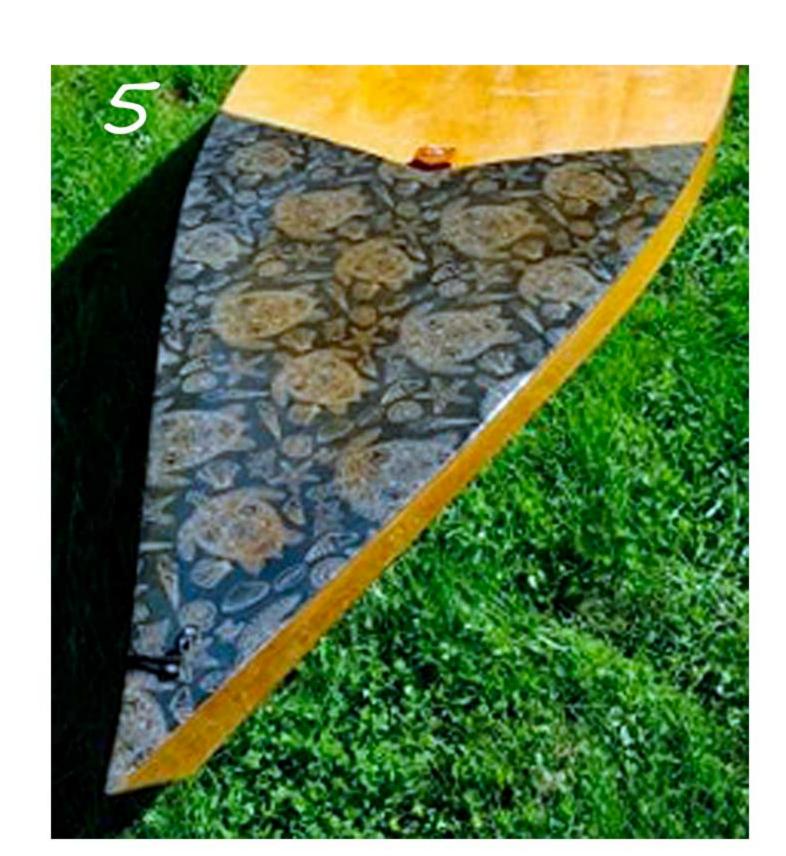

Length 12.5 ft. 3.8 m. Width 29 in. 74 cm. Displacement @ 2.75 in. [7mm] 200 lbs. 91 kg. Hull Depth# 7.25 in. 18.4 cm.

CNC CUT KIT PIECES

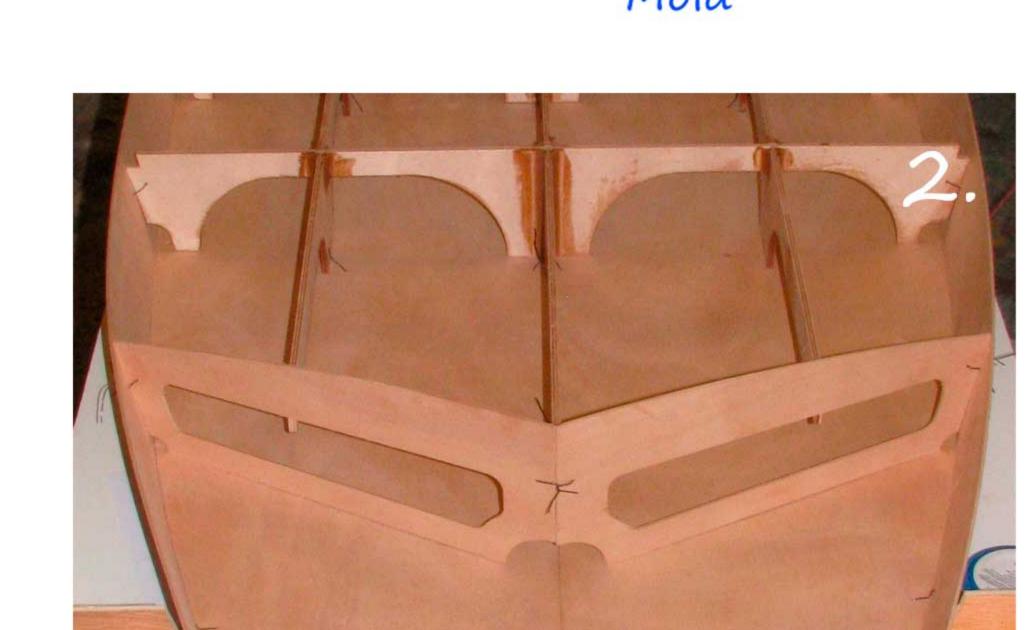

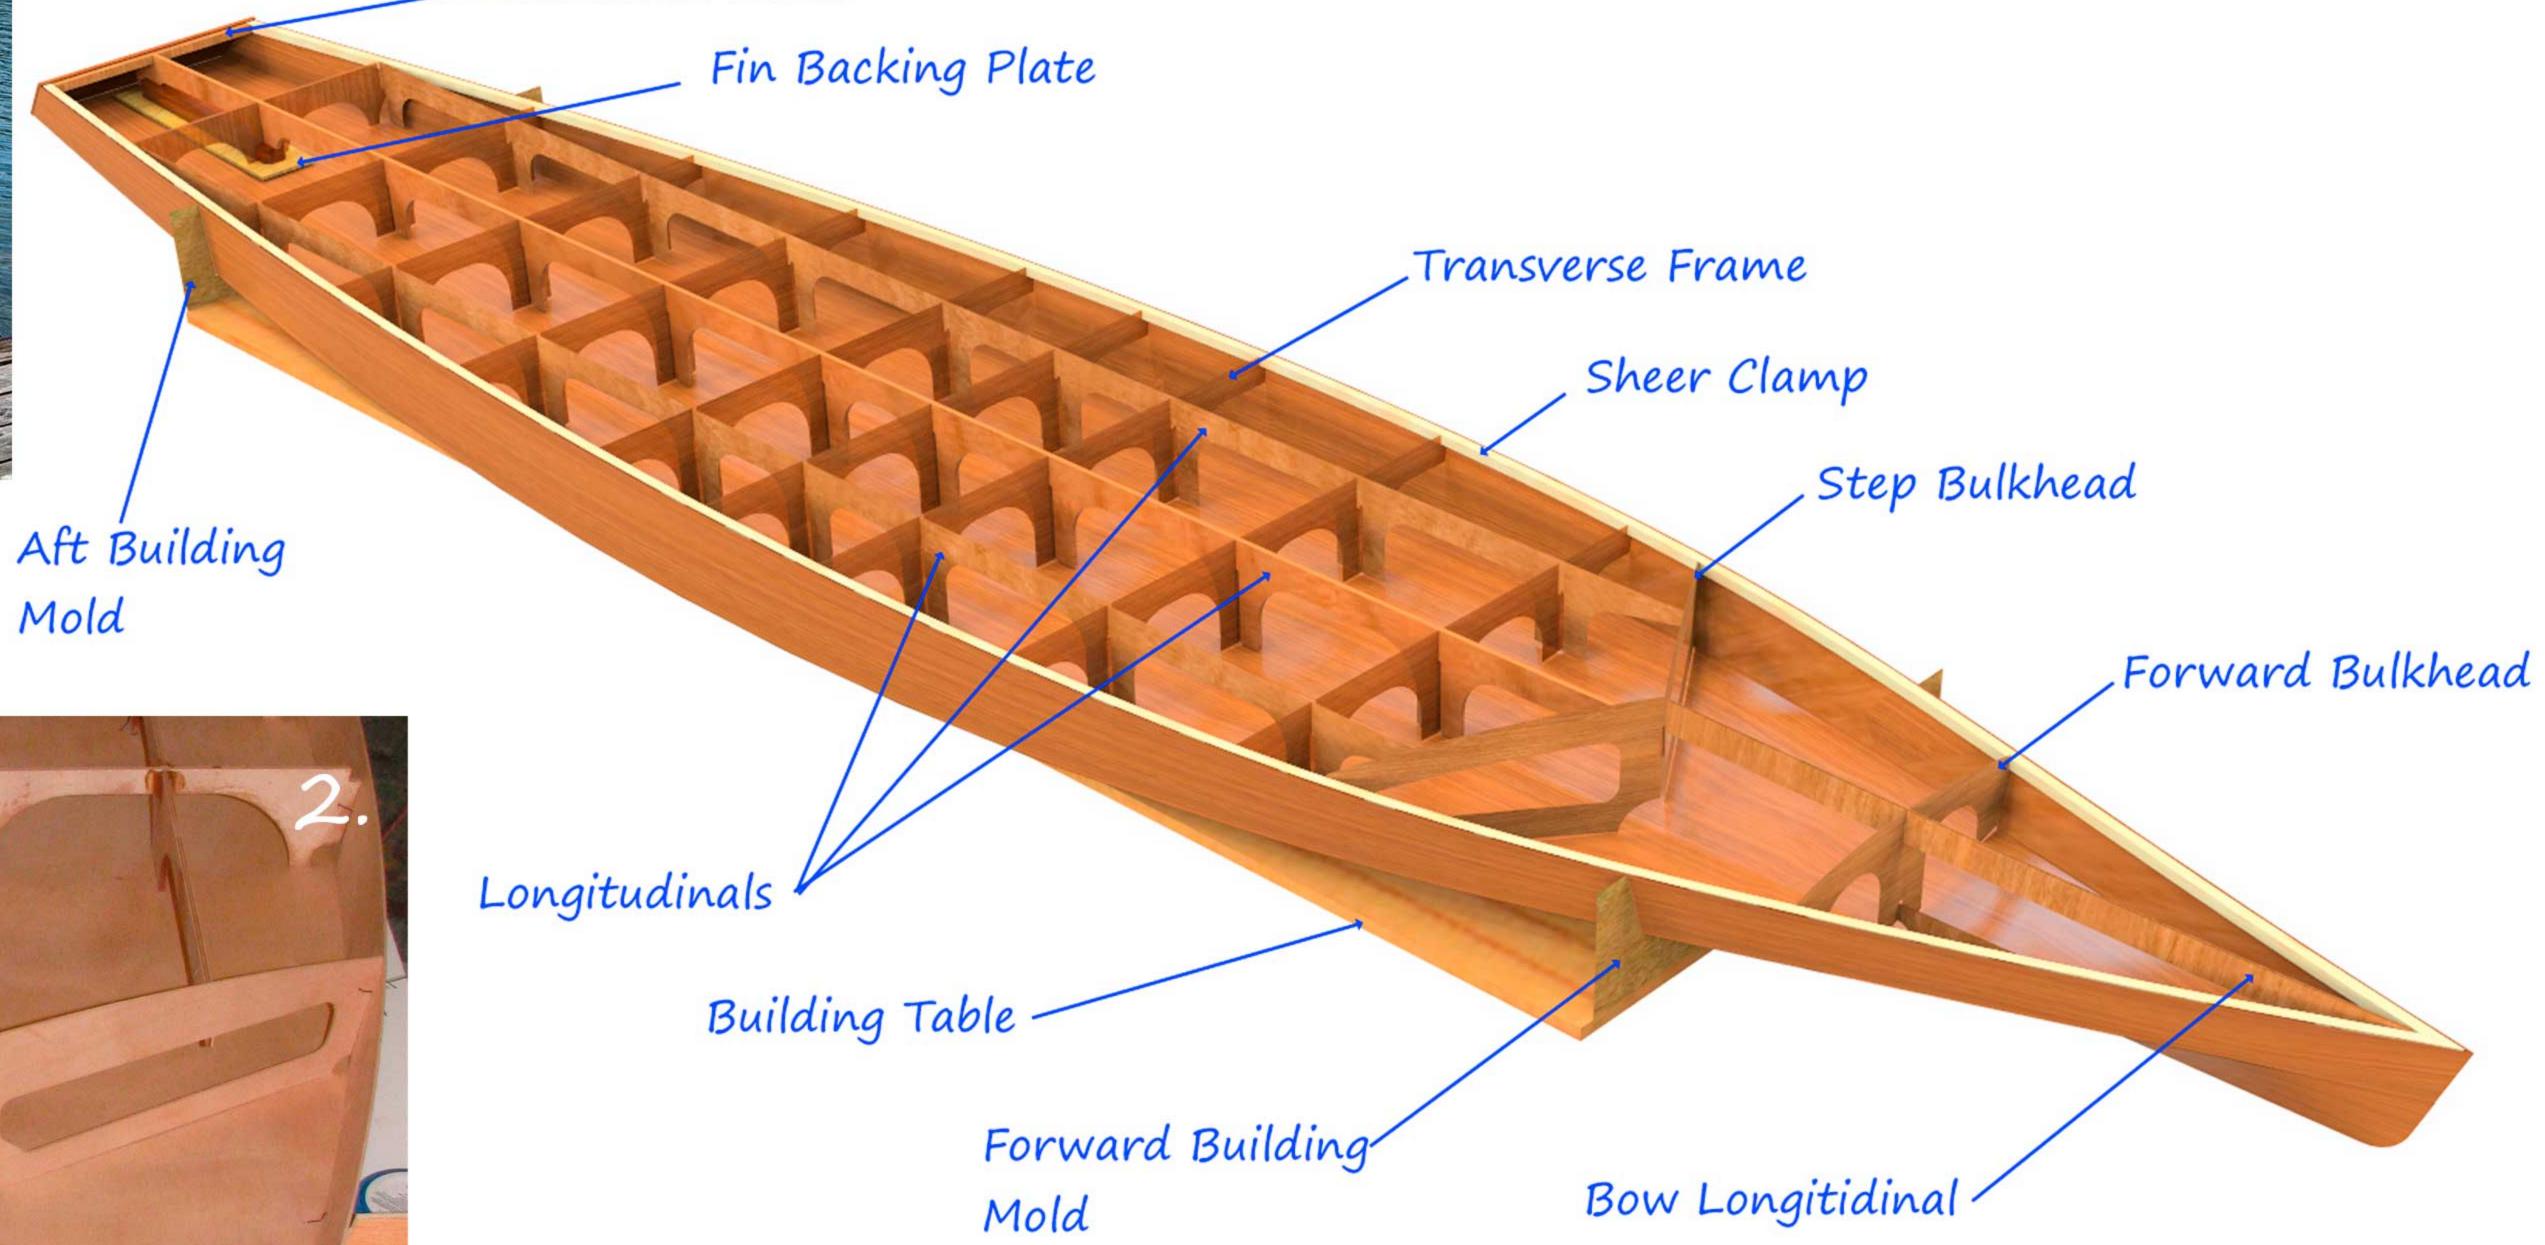

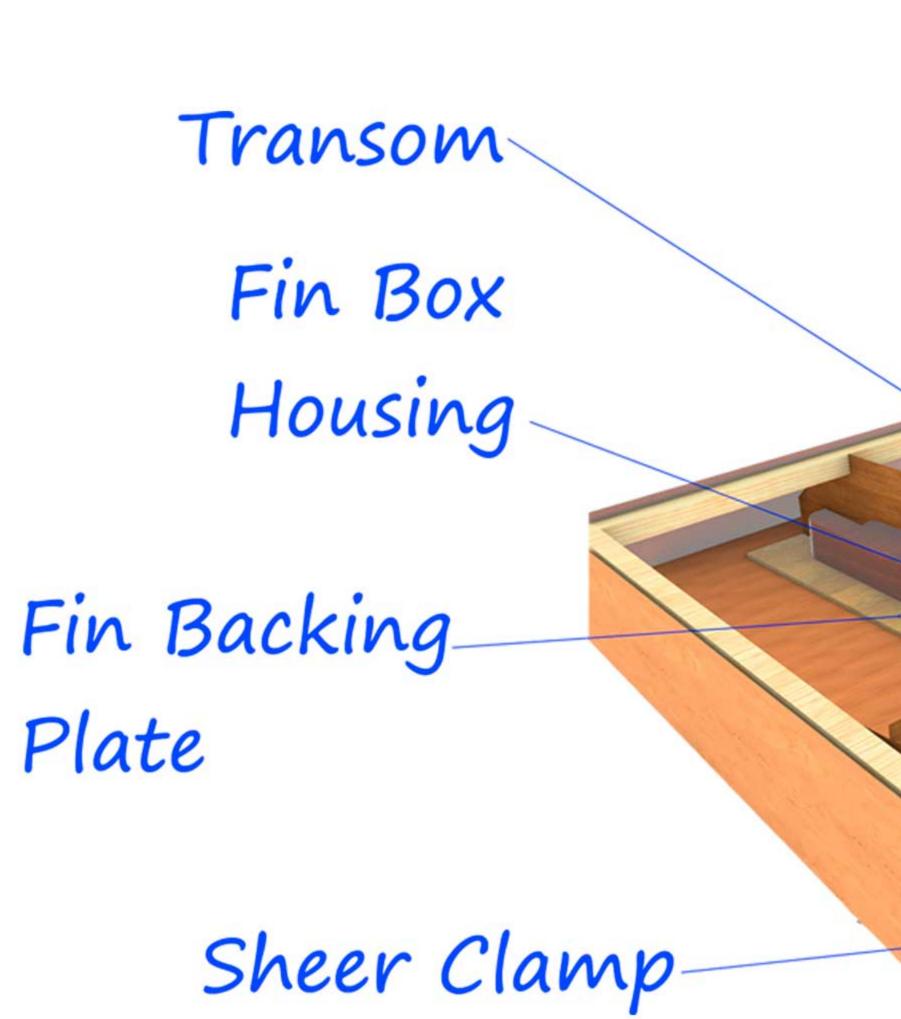

CONSTRUCTION RENDERINGS

Transom Frame

Transverse Frame Longitudinals

- 1. Joining parts of kit to make full length panels for deck and hull
- 2. Wiring structure into hull
- 3. Completed forward structure
- 4. Installing deck using weights and tape to hold it tight to structure while the epoxy between the two cures
- %. Optional fabric covering on forward deck, breaather tube visible
- @ deck step
